DETAILED ACTION

Allowable Subject Matter

1. Claims 1-12, 14-25, and 27-39 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:
The prior art, Java Apache Project, teaches analyzing well-formed XML documents and executing transformations. The reference points to replacing elements with children elements, if they belong to other namespaces, or, if they belong to the XSLT namespace; however, the reference fails to distinguish between two separate transformations. One type of transformation, called a fast transformation that is performed on source documents if they match a specified signature. The second type of transformation, which is called a general-purpose transformation, is performed on specific source documents that do not match the specific criteria. The Java Apache Project further teaches XSLT elements: value-of and apply-templates; however, the reference does not provide a reasonable suggestion for a means of specifying a source node description and a target node description for each of the specified fast transformation.

In reference to independent claims 12 and 25, the claimed features of specifying a signature that identifies a source document type, specifying one or more fast transformations to be performed on documents that match the specified signature, specifying a source node description and a target node description for each of the specified fast transformation, and storing transformation information for each of the specified fast transformations with the transformation information comprising a transformation identifier, the source node description, and the target node description is not shown in the prior art of record and would not have been obvious to one
